1. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings are required now because the application is allowed.
2. Claims 1-11 are allowed.
3. The following is an Examiner's Statement of Reasons for Allowance:

The prior art of record teaches the claimed invention substantially, but it fails to teach or suggest singly or in combination a method/apparatus for calculating a Cyclic Redundancy Check (CRC) value for a multi-bit input data word using a defined generator polynomial having a length comprising the steps of: serially shifting at least a portion of the input data word into a register; XORing the contents of the register with the generator polynomial if the LSB of the register is '1'; shifting the contents of the register right by one position; shifting into the MSB position of the register a new bit of the input data word, having been XORed with the LSB of the register; repeating the previous step for all message data bits; shifting into the register a number of '0's equal to the length of the generator polynomial; and reading from the register the calculated CRC value as set forth in independent claims 1, 5, 6 and 8.
